

## Description of Work (DOW) for:

### Microsoft Cloud Operations Engineering Services (SMA2)

#### *1.1 Objectives*

The Contractor shall provide advanced engineering, operational, and advisory support for CBO's Microsoft cloud environments, including Microsoft 365, Azure, and Microsoft Security platforms. The objective is to ensure a resilient, scalable, and secure Microsoft cloud environment that supports CBO's mission, cybersecurity posture, and continuity of operations. The Contractor is responsible for designing, implementing, maintaining, and optimizing secure cloud services in alignment with NIST SP 800-53, NIST SP 800-207 (Zero Trust Architecture), and FedRAMP Moderate control requirements. Requirements include enterprise tenant management, Azure infrastructure and application development support, Exchange Online and collaboration services, identity and access management, and the implementation of security controls across Microsoft Defender, Entra ID, Purview, and related services. The Contractor will apply Zero Trust principles, least privilege, continuous verification, and conditional access while supporting compliance, audit readiness, and change management processes.

#### *1.2 Scope of Work*

The scope of work includes, but is not limited to, the following activities:

- **Microsoft Cloud Platform Engineering:** Design, implement, operate, and optimize Microsoft 365, Azure, and Microsoft Security services to ensure reliability, scalability, and performance in support of CBO mission requirements.
- **Security Architecture & Compliance:** Implement and maintain cloud security controls aligned with NIST SP 800-53, NIST SP 800-207 (Zero Trust Architecture), and FedRAMP Moderate requirements, including continuous monitoring, risk mitigation, and security posture management.
- **Identity & Access Management:** Administer and secure identity services using Microsoft Entra ID, Conditional Access, privileged access controls, and least-privilege models in accordance with Zero Trust principles and Microsoft best practices.
- **Collaboration & Messaging Services:** Manage and support Exchange Online, Teams, SharePoint Online, and related collaboration services, ensuring availability, security, and compliance with organizational policies.
- **Azure Infrastructure & Development Support:** Provide engineering support for Azure infrastructure, networking, and application workloads, including configuration, maintenance, troubleshooting, and integration with on-premises or hybrid environments as applicable.
- **Security Operations Enablement:** Configure and manage Microsoft Defender, Purview, and related security platforms to support threat protection, data governance, information protection, and incident response readiness.

- **Change Management & Documentation:** Support formal change management processes, maintain technical documentation, and contribute to standard operating procedures to ensure transparency, traceability, and operational continuity.
- **Advisory & Technical Leadership:** Serve as a senior technical advisor to CBO stakeholders, collaborating with network, cybersecurity, and cloud teams to resolve complex issues, improve architecture, and support audits, assessments, and compliance reviews.

### *1.3 Key Personnel*

The following role is anticipated to be required for this work and is considered Key Personnel, in accordance with SOW paragraph 2.9.

- Senior Microsoft Cloud Engineer

#### *1.3.1 Key Personnel Requirements*

The Contractor shall provide a Senior Microsoft Cloud Engineer who meets the following specific requirements:

- Demonstrated ability to provide senior-level technical leadership and independent operational support for enterprise Microsoft cloud environments, including Microsoft 365, Azure, and Microsoft Security platforms. This includes proof of currently maintained Microsoft certifications in all related areas for a period no less than 5 years.
- Proven expertise in designing, implementing, operating, and optimizing Microsoft cloud services to ensure high availability, scalability, performance, and mission alignment.
- Ability to implement and maintain cloud security architectures aligned with NIST SP 800-53, NIST SP 800-207 (Zero Trust Architecture), and FedRAMP Moderate requirements, including continuous monitoring, risk mitigation, and security posture management.
- Advanced ability to fully implement and manage a hybrid Active Directory Microsoft M365 and Entra environment implementing the tiered security standards defined by Microsoft's security framework.
- Proven experience creating and managing all aspects of Windows, MacOS, and Apple iOS devices in Intune including compliance and policy delivery.
- Proven experience creating and managing Autopilot delivery of operating system images and use of policy and on-demand delivery of software using Intune for environments of at least 700 endpoints.
- Practical experience locking down remote PowerShell access for administrative tasks in Entra and Azure across all related APIs to allow necessary administration including

headless Exchange Online mailbox provisioning, SharePoint custom user profile field imports, and all Microsoft Graph related access.

- Advanced proficiency in identity and access management, including Microsoft Entra ID, Conditional Access, privileged access management, and least-privilege access models, including the implementation and minimal impact transition between MFA providers, implementation of 3<sup>rd</sup> party MFA as an Entra provider, and implementation of Smart Card and FIDO based key authentication methods across Windows and MacOS systems.
- Experience managing and supporting collaboration and messaging services, including Exchange Online, Microsoft Teams, SharePoint Online, and related Microsoft 365 workloads.
- Capability to provide Azure infrastructure and application support, including cloud networking, workload configuration, maintenance, troubleshooting, and hybrid integration where applicable.
- Hands-on experience configuring and managing Microsoft security platforms, including Defender, Sentinel, and Purview, to support threat protection, data governance, information protection, and incident response readiness.
- Demonstrated ability to manage and configure data sources feeding into Microsoft Sentinel including ongoing health reporting and alerting on ingest log data quality.
- Ability to support and comply with formal change management processes, produce and maintain technical documentation, training materials, and contribute to standard operating procedures.
- Demonstrated capacity to act as a senior technical advisor, collaborating with CBO engineering teams to resolve complex technical issues and support audits, assessments, and compliance reviews.
- Ability to perform duties with minimal supervision, exercising sound independent judgment and technical authority in maintaining a secure, resilient, and compliant Microsoft cloud environment.
- Implement automated reporting and dashboard creation using Power BI and other Microsoft tools. Reporting must include systems health monitoring, compliance reports, current spend and forecasted spend reports, and utilization reports across all aspects of CBO's Microsoft cloud infrastructure.
- Must have proven experience setting up spending budget configurations in Azure including alerting and reporting for potential overages against budgets that allow 90 days lead time to allow CBO decision time for appropriate actions including either reduction in usage to avoid overages or acquisition and allocation of increased funding.

- Implement incident response and disaster response playbook responses as clearly written practical procedural documents that integrate into CBO's existing IR and COOP documentation and procedural documents.

### *1.3.2 Required Credentials and Work Examples*

The candidate(s) provided by the Contractor must have the following current Microsoft credentials:

- Microsoft 365 Certified: Administrator Expert
- Microsoft Certified: Cybersecurity Architect Expert
- Microsoft Certified: Azure Solutions Architect Expert
- Microsoft 365 Certified: Endpoint Administrator Associate
- Microsoft Certified: Identity and Access Administrator Associate
- Microsoft Certified: Windows Server Hybrid Administrator Associate
- Microsoft 365 Certified: Teams Administrator Associate
- Microsoft Certified: Information Security Administrator Associate

These (or their equivalent prior certifications) should have been maintained for a minimum of 5 years. Expired certifications or certifications never used professionally will not be considered.

Candidates should provide a minimum of 2 and no more than 4 short examples of personally written technical documents (ex. documentation, design documents, diagrams, PowerShell script source code, change control, training materials, policy documents, standard operating procedures) not to exceed a total of 5 pages.

### *1.4 Work Schedule*

The Contractor may be required to perform operational changes on weekends or after-hours to avoid network and work disruptions. Any changes pushed during core business hours (9:00 AM – 6:00 PM, Monday - Friday) must receive prior approval if they may cause a work stoppage for CBO users lasting more than 30 seconds. All potential disruptions must be reported and approved in advance of implementing configuration and policy changes.

### *1.5 Place of Performance*

Work performed under this contract will be performed in a hybrid environment. On-site support shall be performed during business hours at the following locations:

Congressional Budget Office  
Ford House Office Building, 4th Floor  
2nd and D Streets, SW  
Washington, DC 2015

Equinix, Inc.  
Building DC4  
21715 Filigree Court

Ashburn VA 20147

Alternate Computing Facility (ACF)  
9050 Wellington Road  
Manassas, VA 20109

### *1.6 Government Furnished Equipment and Information*

Pursuant to SOW paragraph 2.5, Government-Furnished Property, the Government will provide the following to perform the tasks outlined in this Description of Work:

- CBO-issued laptops, mobile devices, and peripheral hardware (if required)
- Access to internal systems for testing access to tools such as Momentum, Microsoft 365, SharePoint, Zoom, Cisco Webex, and VPN credentials
- Network diagrams, system architecture documentation, current firewall rule sets, and relevant configuration files
- Applicable policies, procedures, and security baselines (e.g., NIST, FISMA, IRS 1075 guidelines)
- Contact information for internal technical points of contact (POCs) and data center operations
